ion Alkaline Water

Packaged Drinking Water

15 Benefits

1. Helps maintain a balanced blood pH level.
2. Improves hydration.
3. Increases strength and stamina.
4. Supports the body's cleansing processes.
5. Helps relieve acid reflux.
6. Supports bone health and development.
7. Helps regulate blood pressure.
8. Helps reduce blood sugar.
9. Helps lower blood cholesterol.
10. Supports cancer treatment.
11. Helps with weight reduction.
12. Strengthens immunity.
13. Slows the aging process.
14. Helps rejuvenate the skin.
15. Supports longevity.

Ion Alkaline Packaged Drinking Water

About 65% of the human body's weight is water, and many illnesses can originate from this water. If the water we drink every day contains the right amount of minerals and beneficial properties, we can more easily protect ourselves from many complex diseases, including heart disease, diabetes, peptic ulcers, different cancers and premature aging.

To protect us and future generations, nine researchers, physicians and professors associated with Harvard University, Boston, USA; Cambridge University, UK; ion Live Science Ltd.; and Rajshahi University, Bangladesh, have conducted long-term research and developed several health-oriented waters: alkaline ionized water, mineral water, hydrogen water, ORP water, lithium water, pregnancy water, baby water, cooking water and baking water.

Key functions of the developed water

1. Essential minerals in the correct proportions help regulate blood pressure and cholesterol and play an important role in preventing stroke and heart attack. They are also presented as helpful for arthritis, osteoporosis, infertility, constipation, premature aging and hair loss, and for improving facial and skin appearance.

2. Dissolved H_2 gas - described as a first in Bangladeshi water - acts as a neuroprotective agent and helps prevent damage to the brain. By helping regulate insulin levels, it is also presented as supporting diabetes control and protecting other organs from diabetes-related damage.

3. The water has a low ORP value - also described as a first in Bangladesh - so it works as an antioxidant. By neutralizing harmful free radicals, it is presented as helping the body resist several types of cancer.

4. The water has been made alkaline in balance with blood pH. It is presented as particularly helpful for conditions associated with unhealthy food, such as hyperacidity and peptic ulcers.

5. The water is presented as strengthening immunity and helping the body resist coronavirus (COVID) and dengue. It is also presented as supporting children's bone, muscle and tooth development and improving memory.

Quality control follows guidance from the World Health Organization (WHO), the U.S. Food and Drug Administration (FDA) and Bangladesh Standards (BDS). The product is described as BSTI-approved and compliant with ISO 9001:2015. Health-conscious consumers in the United States, Canada, England, Australia, Japan and Singapore are said to drink this type of water and use it for cooking.

Introduced in Bangladesh as a first: chemical-free Alkaline Water developed with a scientific formula and Japanese technology, collected from a natural source and purified using Latest Deep Down Technology. It is presented as quickly reducing acidity, dehydration, ion deficiency, digestive disturbance and heartburn while helping maintain a comfortable stomach and intestinal environment.

イオン

ION KIDNEY WATER

Especially suitable for dialysis and kidney patients

For dialysis and kidney patients, ILSL uses an electrolysis process to produce completely germ-free water with small clusters and low TDS. The brochure states that this reduces pressure on the kidney membrane and thereby helps prolong kidney function.

Change your Water
Change your Life

イオン

ION PREGNANCY WATER

Especially suitable during pregnancy

Pregnant women need adequate amounts of minerals and vitamins. Following FDA guidance, this water contains the required minerals Fe, Ca, Mg, Mn, Zn, Se and Cu, together with vitamins B and C, iodine and folate. The brochure states that regular consumption plays an important role in addressing physical problems during pregnancy and helping prevent childbirth-related complications.

イオン

ION INFANT WATER

For children from birth to 1 year

ILSL has produced completely germ-free, small-cluster water for infants in line with WHO and FDA guidance. Its small-cluster properties allow baby food to mix quickly and evenly in the water. The brochure states that food prepared in this way is easier for babies to digest, which accelerates metabolism - an important benefit for children.

イオン

ION KIDS WATER

Especially suitable for children aged 4 to 13

The water has been made mildly alkaline to suit this age group. It contains adequate amounts of essential vitamins and minerals - Ca, Mg, Na, K, Zn, Fe, P, F, Cl and I. The brochure states that the water plays an important role in the development of bones, muscles and teeth, while also supporting improved memory.

イオン

ION BEAUTY WATER

Beauty Spray

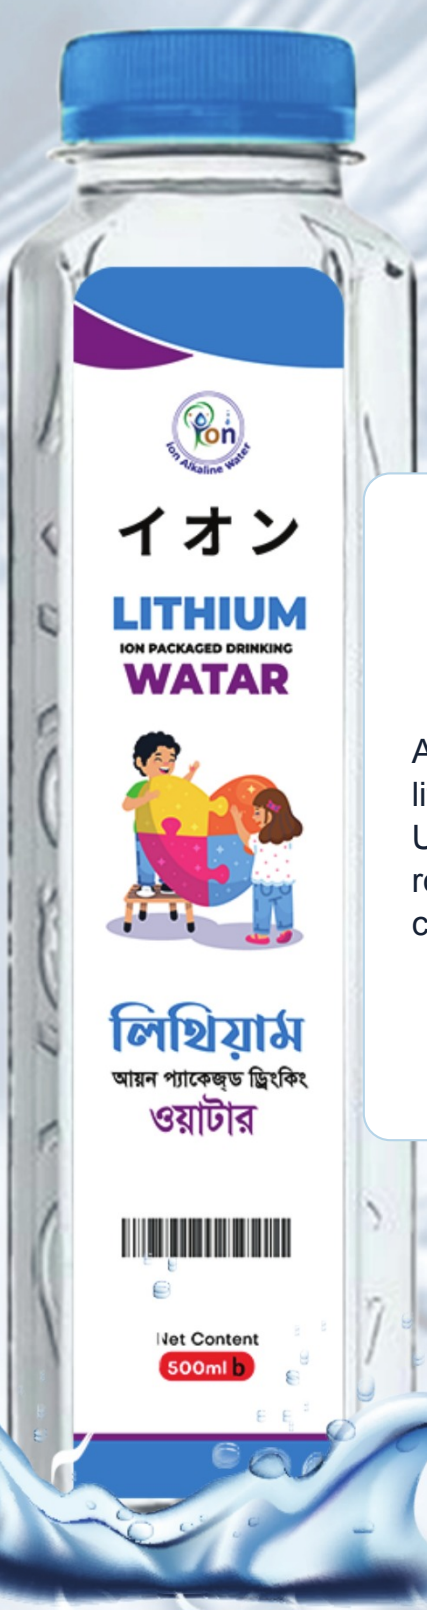

Ion Beauty Water is a type of small-cluster water developed through scientific research. When used, the water temporarily enters the skin cells, relieves dryness and produces a refreshing, brightening effect.

To match the skin's natural pH and support smooth skin, Ion Beauty Water has a pH of 5.5 +/- 1. The brochure states that it moisturizes the skin and helps keep it free from bacteria.

Minerals in the water are described as providing additional benefits: Cu supports the formation of collagen and elastin to keep the skin fresh, while Zn and Se help protect against harmful ultraviolet radiation and are presented as supporting the prevention of skin cancer.

Because it contains suitable biological components and has small-cluster properties, the water can easily clean impurities from skin pores. The brochure states that this helps keep skin free from acne and helps prevent acne marks and visible signs of aging.

イオン

ION LITHIUM WATER

Presented as especially suitable for people with bipolar disorder or mental illness

According to the brochure, this water contains adequate lithium, minerals and vitamins in line with guidance from the U.S. FDA. It is presented as playing a special supportive role for people with bipolar disorder and other mental-health conditions.

ion Cooking

ION COOKING WATER

Most city residents use tap water every day to cook rice, fish, meat, vegetables and to prepare tea and coffee. In a least developed country like ours, WASA often extracts water for long periods through the same deep tube wells. In many places, old pipes deteriorate and toxic substances such as lead, cadmium, chromium and arsenic can enter the water (source cited in the brochure: IJCPS, Vol. 2, No. 6, Nov-Dec 2013). These substances are described as contributing to cancer, diabetes, liver cirrhosis and other complex diseases.

Some health-conscious urban residents use reverse-osmosis (RO) water for cooking. However, the brochure states that RO water contains no minerals and that daily use has created public-health concerns in several countries (source cited: BCSIR; Daily Amader Shomoy, 29 Sep 2021).

To preserve food quality, ion Live Science Ltd. developed Ion Cooking Water with properties suited to cooking. It is presented as preserving the alkaline characteristics of vegetables and helping reduce saturated fat in meat. The brochure says that health-conscious consumers in developed countries, including the United States, Australia and Japan, cook with this type of water to preserve taste, alkalinity and the quality of mineral components.
